Dear Sir/Madam

UPDATE - NEW QUARTERLY PRODUCTION RECORD ACHIEVED AT SURDA OPERATION

Diversified minerals developer and producer India Resources Limited (ASX: IRL) is pleased to advise that a new quarterly copper production record has been achieved at the Surda copper mine in India.

Copper production at Surda for the March 2011 quarter was 884 tonnes of Copper metal-in-concentrate. The average feed grade for the quarter was 0.89% Cu. The previous quarterly copper production record for the mine was 855 t of metal-in-concentrate during September 2009 quarter.

Production for the month of March was 315 tonnes of Copper metal-in-concentrate. Average ore grade achieved for the month of March was 0.97% Cu approximately. The higher grade from the Surda is significantly contributed by newly developed area at lower levels of northern part of the mine.

Copper production from the Surda operation is forecast to be even stronger in the future months, with company aiming to reach 900t metal-in-concentrate per quarter average.

Yours faithfully

Arvind Misra
Managing Director
